SAMPLE PREPARATION

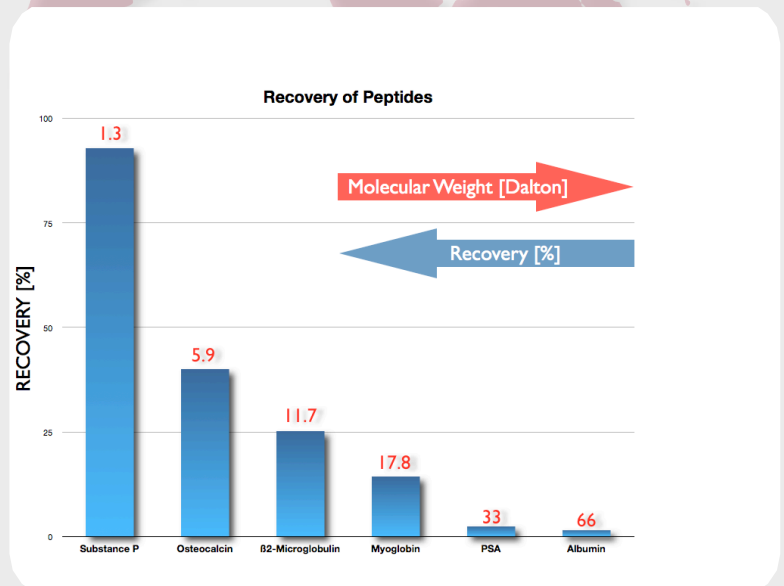

**NEW
SERVICE**

ENRICHMENT OF LOW MOLECULAR WEIGHT COMPONENTS FROM COMPLEX MIXTURES

Whether you are isolating a putative diagnostic biomarker or drugs under the scrutiny of the FDA/EMEA or PMDA, PXBioVisioN delivers superior isolation of small molecules. From its uncompromising pursuit of the endogenous peptidome, PXBioVisioN works with you to deliver your analytes of interest with the highest concentration and resolution.

The sample preparation service offers enrichment solutions for low molecular analytes. With a more than 95% of total protein removal, sample volumes between 100 microliter and 1 milliliter can be explored. In addition to body fluids like blood plasma, serum, urine, CSF or synovial fluid, the unique approach can be applied to tissues and cell culture.

Improvements made it possible that this technology can be applied not only to

peptides but also to enrich drugs from complex body fluids like plasma or serum. We offer the possibility to evaluate the preparation service for pharmaceuticals for a limited number of samples for free to ensure, that we meet your expectations.
